Performance

Max. assist speed 25km/h
Bike weight 19.4kg
Range 80km*

* It may vary depending on usage conditions and circumstances.

Max. rider weight 100kg
Rider height range 150~180cm*

* It may vary depending on individual differences, such as body type.

Drive Unit

Motor BAFANG, Hub-drive Motor, 25Nm Max. torque, 250W power
Battery Lithium ion battery, 378Wh, 36V
HMI 1.9-inch TFT, Power-SW & Mode-SW
With Bluetooth, Type-C charging

Components

Handgrip ERGON
Brake SHIMANO, Hydraulic Brake
Rotor 160mm
Belt Drive GATES, Carbon Drive CDX
Tire SCHWALBE, Big apple 16 x 2.0
Front hub SHIMANO, With Quick release
Seatpost With Suspension
Stem 90 degree rotation stem,
Quick release lever with safety lock

New DAYS That Changes the Urban Lifestyle.

XROSS

New DAYS That Changes the Urban Lifestyle.

The battery is built into the tube, and combined with XROSS's unique compact frame design, it creates a seamless, integrated frame. It's easy to get on and off, handles effortlessly, and is characterized by its exceptional rideability.

Fold the frame in the middle and rotate the handlebars 90 degrees to store it in a small space. Since it doesn't take up much room in the car, it's easy to load.

We've finished the frame with a smooth, beautiful welded surface, giving it a premium look that's a cut above the rest. This frame meets ISO industrial standards and offers exceptional durability and reliability. The reflective surface features a luxurious pearl-gold finish. The frame is finished in a stylish, subdued light gray with a hint of blue.

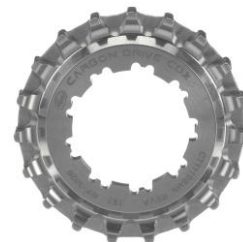

We've equipped the bike with a rack that allows you to mount pannier bags on the front. After packing your bags following a shopping trip, you can load them onto the rack in a single step. Since it accommodates even large-sized bags, you can carry a lot of luggage.

We have equipped the front and rear of the frame with **attachment mounts** compatible with the KLICKfix system, which allows for one-step installation and removal. You can attach baskets or carriers that suit your lifestyle.

 **BELT DRIVE**

We have adopted the CDX BELT DRIVE from GATES, a German brand renowned for its durability and reliability. It is characterized by its exceptionally quiet operation and smooth drive. The carbon-reinforced belt is the most compact and lightweight option available; it lasts longer than a chain, requires no greasing, and is virtually maintenance-free. It won't stain your clothes with oil, and when installed in a vehicle, it won't leave oil stains in the cabin.

It features a lightweight, compact, and powerful motor, along with a high-precision torque sensor. Whether you're climbing steep hills or accelerating briskly, the in-wheel motor provides a smoother, more powerful ride and a comfortable experience with control that feels natural to the rider. Even when loaded with luggage, the walk-assist feature makes pushing the bike up steep hills a breeze.

Equipped with a 378Wh (36V / 10.5Ah) lithium-ion battery, which is housed inside the down tube for a stylish design and easy battery removal. It offers a range that provides peace of mind even on long rides. It takes 5 hours to fully charge (using a 2A charger).

The display provides information essential for riders while on the move, including speed, battery level, range, mileage (TRIP, ODO), and maintenance prompts (available in 6 languages: English, German, Dutch, French, Italian, and Czech). It features an intuitive HMI for easy operation, including assist mode, walking assist, power on/off, and assist mode switching. It also connects to a smartphone via Bluetooth to provide more detailed information. It is equipped with a Type-C charging port for charging smartphones.

SHIMANO hydraulic disc brakes have been adopted. They deliver consistent braking performance even on wet roads or in inclement weather, and allow for precise control with minimal effort, ensuring reliable braking and providing a safe and secure riding experience.

Equipped with a large, spacious saddle that offers both comfort and firm support. Combined with tires featuring a large air volume to absorb minor bumps and a suspension seatpost to absorb major impacts, this creates a comfortable riding cockpit.

German brand SCHWALBE's wide small-diameter tires offer high durability, puncture resistance, and a comfortable ride. With a large air volume, they absorb vibrations from road bumps and gaps, supporting safe and stable riding.

The QUICK PARK Stem can rotate the handlebars 90 degrees to either side simply by releasing the safety lock and lever. It allows for storage in the smallest of spaces, whether you're folding the bike or tucking it neatly against a wall.
